

## **Energy and Carbon Masterplan emissions reduction target – Update noted – Instruction to Acting Executive Director of Land and Environmental Services.**

**3** With reference to the minutes of the Executive Committee of 2nd April 2015 (Print 1, page 11) approving the Energy and Carbon Masterplan for the city, there was submitted a report by the Acting Executive Director of Land and Environmental Services providing an update on energy consumption and carbon emissions in Glasgow since the baseline year of 2006 and analysing the city's progress towards the 30% carbon dioxide (CO<sub>2</sub>) reduction by 2020 target, advising

- (1) that the Masterplan retained the commitment to achieve a 30% reduction in Glasgow's carbon emissions on a 2006 baseline and identified 33 key actions aimed at reducing carbon emissions in the 3 main sectors of transport, domestic and industrial/commercial sectors, that would ensure that Glasgow would continue to successfully reduce CO<sub>2</sub> emissions by 2020;
- (2) that the Department for Business, Energy & Industrial Strategy (BEIS) released data on energy consumption and carbon emissions for local authorities annually 2 years in arrears;
- (3) of the carbon emissions and energy consumption figures for Glasgow based on the most recent BEIS data together with an analysis of those figures; and
- (4) of the significant projects included in Masterplan.

After consideration, the committee

- (a) noted the report and supported the work of Land and Environmental Services in reducing Glasgow's CO<sub>2</sub> emissions and environmental impact, including the associated financial burden; and
- (b) instructed the Acting Executive Director of Land and Environmental Services to provide a further update in 12 months on the city's progress towards the 30% carbon dioxide reduction target.
