

Carbon management plan - Performance update noted.

5 There was submitted and noted a report by the Executive Director of Neighbourhoods and Sustainability regarding the Council's performance in relation to the targets set out in the Carbon Management Plan (CMP), advising

- (1) of the CMP, which set out the actions for the Council in order to meet Glasgow's carbon emissions reduction ambitions;
- (2) of the Carbon Management Team (CMT) and their responsibilities, which supported progress towards the plan, with the overarching aim to reduce the Council's carbon emissions by 30% by 2020, based on a 2005/06 baseline and which equated to a reduction of approximately 60,000 tonnes of carbon dioxide from that year's emissions;
- (3) of the performance of the CMP in 2019/20, with a specific breakdown on the source of emissions from different aspects of the Council family's activities and annual footprints by emission source for the Council and its family for that period and that the Council family had reduced its emissions by an absolute proportion of 46.65% through the 2019/20 reporting year; and
- (4) that the Council had met its 2020 carbon emissions reduction target, however, it would continue to drive down emissions and look at even more challenging future targets and the CMT would continue to push the Council and its family to do all they can to keep reducing their emissions.
