

Sustainable Glasgow - Electric vehicle use noted.

4 There was submitted and noted a report by the Executive Director of Land and Environmental Services regarding the changes to electric vehicle parking controls within the city, advising

- (1) that the Council had successfully provided the infrastructure required to promote increased electric vehicle use in the city having installed 65 charging points, with a further 14 in progress throughout the city;
- (2) that the demand for access to the charging points now exceeded what was available and given that there were no time limits for on-street charging bays it was necessary to address the current use of charge points with the implementation of parking controls on electric vehicles; and
- (3) of the key proposals for electric vehicle parking.
