

Castlemilk Community Survey

2022-23

Stephen McGill and Richard Hill

1 - Castlemilk

Castlemilk neighbourhood is the 10th largest, in populations terms, of the 56 neighbourhoods in Glasgow city.

Castlemilk's population of 14,690 is 2.3% of Glasgow's population.

The age profile of Castlemilk's population is:

- 0 -15 years: 20% (16% Glasgow¹)
- 16-64: 65% (72% Glasgow)
- 65-65+: 15% (13% Glasgow).

Castlemilk age profile differs most noticeably in the lower percentage of working age people.

Castlemilk's housing tenure profile is:

- Social Rented Sector: 71% (36% Glasgow)
- Privately Owner (either mortgaged or owned outright): 23% (44%)
- Private Rented Sector: 4% (20%).

As illustrated in these figures, Castlemilk's housing profile is significantly different from the housing tenure profile for Glasgow, both in terms of the level of rented/owner occupied housing and in the balance between the social/private rented sector.

The life expectancy at birth in Castlemilk is currently:

- Female: 78 years
- Males: 71 years.

This level of life expectancy is in line with the Glasgow life expectancy for females (n78) but is lower for males (n73) and is **three** and **five years below** the Scottish average life expectancy levels for females (n81) and males (n76), respectively.

According to the 2020 Scottish Index of Multiple Deprivation (SIMD), Castlemilk is the MOST deprived neighbourhood in Glasgow. 13 (65%) of the 20 data zones² in Castlemilk are ranked overall within the 5% most deprived data zones in Scotland. The equivalent level for Glasgow is 18% of data zones.

The 2020 SIMD ranking is built up from a total of 33 indicators covering seven domains. The percentage of data zones in Castlemilk that are ranked in the worst 5% for the individual domains are as follows:

- Income: 70% (18% Glasgow)
- Employment: 55% (17%)
- Health: 50% (21%)
- Education, Skills and Training: 35% (12%)
- Crime: 5% (9%)
- Housing: 0% (26%)
- Geographic Access to Services: 0% (0%)

¹ Any comparative figures in parenthesis in this report will refer to Glasgow, unless otherwise indicated.

² Data zones are the primary geography for the release of small area statistics in Scotland, equating to around 250 households.

2 - The Castlemilk Community Plan Survey

In the spring of 2022, the Castlemilk Community group agreed to carry out a community survey in Castlemilk. The main objective of the survey was to get a better understanding of the local community views which would assist in the development of a Castlemilk Locality Plan, reflecting the community's views.

The survey was available for completion both online and through in-person interviews. The survey generated a good level of response with **888** surveys completed in full and a further **147** who did not respond fully to the survey, which the group chose to include in the results. (**1035 Total**)

In addition to the community survey, Ardenglen and Cassiltoun Housing Associations kindly agreed to include six similar questions to those in the community survey within their 2022 Tenant Satisfaction Surveys (TSS). Findings from the TSS (Ardenglen: 396 surveys; Cassiltoun: 424 surveys) are included in this report as a comparator to the community survey data (e.g., Appendix 3).

2.1 - Community Survey Findings

For the purposes of analysis, the respondents have been split and presented in three groupings:

- Residents aged 18 and over (Resident Adults) n=663
- All respondents aged 17 and under (Children) n=205
- Non-Resident adult respondents n=167

3 - Castlemilk Survey Findings (Resident Adults)

3.1 - Neighbourhood Statements

The initial survey question was seven statements about their local neighbourhood which residents were asked to indicate how much they agreed/disagreed with the statements.

There was a strong majority of positives responses for five of the seven statements, ranging from 15 times more positive response re “the friendships and associations...” to 5 times more positive responses for “everyone has the opportunity ...” It is noticeable that the highest positive ratings relate to the people and the feeling of community within Castlemilk.

“ I feel able to influence decisions that affect the local area” was the only statement for which there were more negative responses. 68% (n439) of the adult residents either disagreed (37%) with the statement or responded in a neutral way (31%) to the statement.

Appendices 1-3 illustrate comparative findings for each of the seven statements which break down the responses to each statement by a) age (e.g., those aged 26–55 were much more likely to respond negatively to “I feel able to influence decision...”); b) whether the respondent view of whether there had been positive

change in the last three years and c) the responses from the TSSs. Some comparative information from other geographical areas does exist so it has been included, where applicable, in the following summaries of the statement responses:

- “I would like to be **More Involved** in the decisions that affect my local area” - Nearly two thirds (65%) of respondents agreed with the statement. The majority in agreement was consistent:
 - across all the age groups, ranging from 61% among the over 55s to 70% among the 26-35 year olds; and
 - irrespective of whether the respondent had seen positive change in the local area over the last three years (Yes 72%; No 63%); and

the level agreeing with the statement was much higher than in

- the Ardenglen (10%) and Cassiltoun (22%) Housing Association Tenant Satisfaction Surveys;
 - Glasgow wide surveys (50% - 2022 Glasgow Household Survey; 39% - 2019 Scottish Household Survey).
- “I feel able to **Influence Decisions** that affect the local area” – Whilst this was the only statement for which overall there were more disagreeing responses than agreeing, the higher number of disagreeing responses:
 - was not consistent across all the age groups;
 - was not a majority for any age group (highest percentage disagreeing was 45% among those aged 36-45);
 - had a correlation with whether the respondent had seen positive change in the local area over the last three years (Yes 19%; No 50%); and
 - hadn’t had a significantly negative impact on the community’s desire to be involved in local decision making, as highlighted above by the majority who wanted to be “more involved”.

In comparative terms, the percentage (32%) who felt they could influence decision was significantly higher than the most recent survey levels for Glasgow/Scotland (2019 Scottish Household Survey: 17% for both Glasgow and Scotland) and reported in Ardenglen TSS (19%) but was much lower than the level in the Cassiltoun TSS (49%).

- “**Information** is easily available about what is going on in the area” – 52% (66% of those who expressed a definitive agree/disagree opinion) of respondents agreed that information is easily available but the level of negative responses was still the second highest for the seven statements (27%; more than a third (34%) of those who expressed a definitive agree/disagree opinion). In summary:
 - there were more positive responses across all age groups but it was not a majority view for all age groups, ranging from 43% to 65%;
 - there was a clear correlation between respondents’ views of whether information is easily available and whether the respondent had seen positive change in the local area over the last three years. 72% of respondents who had seen recent positive change expressed the view that information was easily available but this level drops to 41% for those who view was that there hadn’t been positive change in the previous three years; and
 - in comparative terms, the level of positive responses (52%) was significantly lower than for both the Ardenglen HA (79%) and Cassiltoun HA (94%) TSSs and vice versa, the level of negative responses (27%) was much higher than for both TSSs (3% and 1% respectively).

The following four statements are collectively about ascertaining the residents’ views on whether there is a community spirit and a sense of belonging within Castlemilk. The expectation is that there should be a consistency in the responses across the four statements and this expectation is met with the level of positive responses ranging from 70% - 80%. Another common feature for the four statements is the very high level of positive responses within the TSSs for the statements (e.g., level of agreement ranges from 88% to 94%; level of disagreement ranging from 0% to 4%) so no specific comparative references to the TSSs are made for any of the four statements.

- “Everyone has the opportunity to **Feel Part** of the local **Community**” – 70% of respondents agreed with the statement. The majority in agreement was consistent
 - across all the age groups, ranging from 62% among the 46-55 year olds to 80% among the over 55s; and
 - irrespective of whether the respondent had seen positive change in the local area over the last three years, albeit that there is a 17 percentage point difference in the level of agreement (Yes 87%; No 60%). More than a fifth (22%; n60) of respondents, whose view was that there hadn’t been recent positive change, didn’t agree that everyone had the opportunity to feel part of the local community.

The Castlemilk survey level of agreement was significantly higher than the level of response for a similar statement in Glasgow wide surveys (60% - 2018 Glasgow Household Survey; 61% - 2018 NHS Greater Glasgow & Clyde Health and Wellbeing Survey).

- “People can **Ask Neighbours for Help** when they need it” – Three quarters (76%) of respondents agreed with the statement. The majority in agreement was consistent:
 - across all the age groups, rising from 67% among the 18-25 year olds to 82% among the over 55s; and
 - was not dependent on whether the respondent had seen positive change in the local area over the last three years, albeit that there is a 17 percentage point difference in the level of agreement (Yes 86%; No 69%).

The Castlemilk survey level of agreement was lower than the Glasgow wide responses to a similar question (84% 2018 Glasgow Household Survey; 83% - 2018 NHS Greater Glasgow & Clyde Health and Wellbeing Survey).

- “The **Friendships and Associations** I have with people in my local area mean a lot to me” – Four out of five (80%) respondents agreed with this statement. The majority in agreement was consistent:
 - across all the age groups, ranging from 71% among the 36-45 year olds to 93% (small sample) among the 18-25 year olds; and
 - was not dependent on whether the respondent had seen positive change in the local area over the last three years, albeit that there is a 15 point percentage difference in the level of agreement (Yes 90%; No 75%).

The Castlemilk survey level of agreement was higher than the Glasgow wide response to the same question (73% - 2018 NHS Greater Glasgow & Clyde Health and Wellbeing Survey).

- “I feel I **Belong** to this local area” - This statement is in essence a summary of the previous three statements and, given the responses to the previous three statements, it is not surprising that 78% agreed with the statement. The majority in agreement was consistent:
 - across all the age groups, ranging from 70% among the 46-55 year olds to 90% among the 18-25 year olds; and
 - was not dependent on whether the respondent had seen positive change in the local area over the last three years, albeit that there is a 17 point percentage difference in the level of agreement. (Yes 90%; No 73%).

In comparative terms, the Castlemilk survey level was in line with the Glasgow wide level of response in both the 2018 Glasgow Household Survey (78%) and the 2018 NHS Greater Glasgow & Clyde Health and Wellbeing Survey (78%) but was higher than Glasgow level in the 2019 Scottish Household Survey (71%). The most recent figure for Scotland is 80% (2021 Scottish Household Survey).

The conclusion from the responses to these four statements is that a clear majority of Castlemilk residents feel that there is a positive sense of a community existing in Castlemilk.

3.2 - Have you seen a Positive Change in the Local Area in the last Three Years?

As illustrated in the previous section, a respondent’s answer to whether they have recently seen any positive change is a significant factor for many respondents in determining how they will answer other survey questions.

Table 1 (overleaf) shows that the:

- majority (52%) of Castlemilk residents responded that they hadn’t seen positive change over the last three years. When you exclude the “Don’t Know” responses, the percentage of respondents who had or hadn’t seen positive change in the last three years becomes Yes (39%) and No (61%), respectively; and
- “No” majority was consistent across all age ranges over the age of 26. The age group that was most likely to have seen positive change were residents aged 55+.

Resident Adults n=537						
Table 1: Q8 = Have you seen a positive change in the local area in the last three years?						
Age Ranges	Yes		No		Don't know	
Did not answer	5	26.3%	11	57.9%	3	15.8%
18-25	11	36.7%	8	26.7%	11	36.7%
26-35	31	30.1%	53	51.5%	19	18.4%
36-45	26	26.5%	55	56.1%	17	17.3%
46-55	29	29.6%	55	56.1%	14	14.3%
55+	74	39.2%	98	51.9%	17	9.0%
Total	176	32.8%	280	52.1%	81	15.1%

Cross tabulation analysis offers a chance to break down results by multiple factors. Appendix 2 illustrates that a majority of those, who had seen recent positive change in the area, answered “Yes” to all seven statements but it also illustrates the significant impact on the answers of whether a respondent had seen recent positive change, as follows:

- 34 percentage points difference in being “able to influence decisions that affect the local area” (55% Yes: 21% No);
- 31 percentage points difference in “information is easily available about what is going on in the area” (72% Yes: 41% No); and
- 27 percentage points difference in “everyone has an opportunity to feel part of the local community” (87% Yes: 60% No).

Similarly, there were significant differences in the level of negative responses for those statements depending on whether the respondent had seen recent positive change in the area. A couple of examples to show the strength of this “negative” correlation are:

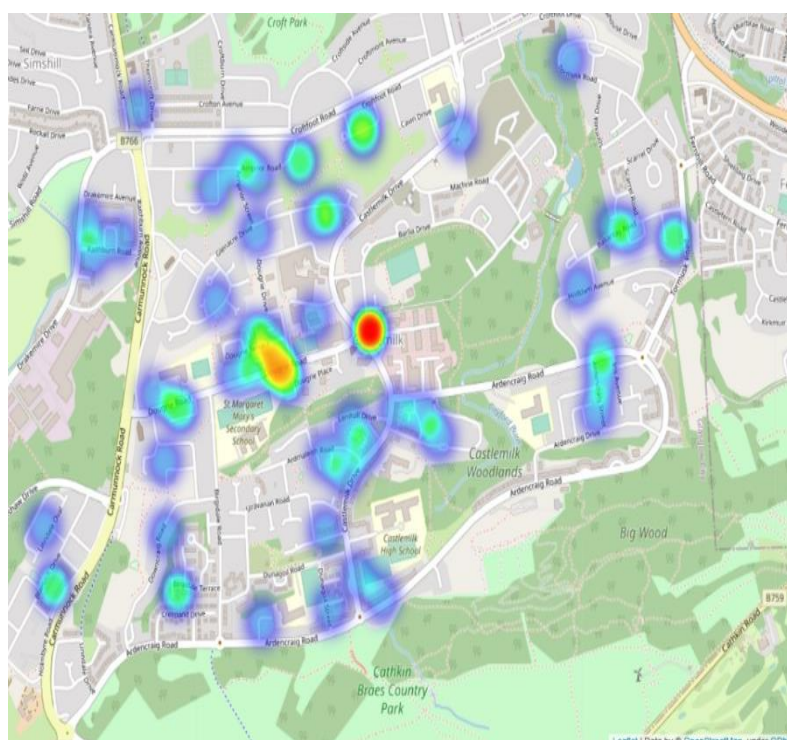

- 4 times more people disagreed with the statement about being able to influence decisions had stated No rather than Yes as to whether they had seen positive change in the previous three years; and
- 4 times more people disagreed with the statement that information is easily available had stated No rather than Yes as to whether they had seen positive change in the previous three years.

When you look at the respondents who disagreed with both statements, the “negative” correlation strengthens as those respondents were more than 5 times more likely to have said “No” to whether they had seen a positive change in the local area in the last 3 years.

The conclusion is that a resident’s view on whether they has been recent positive changes in Castlemilk has a significant impact on their overall opinion on Castlemilk as a place to live.

A heat map has been generated, indicating the location of those who has disagreed with both statements and replied that they had not seen a positive change in the local area in the last 3 years.

Using the postcode that the respondents provided, the heat map for this “disagree” group highlights the highest respondent location as red, with a sliding scale to light blue which indicates the lowest count of respondents in this category.

3.3 - Things that You Like about the Local Area

Question 6 in the survey asked respondents to identify up to 3 things that they liked about their local area. It was an open question where responses were entered into a text box, thereby allowing the potential for a wide variety of responses.

In total, 479 respondents (72.2% of those surveyed) identified at least one thing that they liked about the local area, totalling 1,103 likes. For analysis purposes, the responses have been grouped into seven thematic categories, as illustrated in charts below. Examples of the responses for each category are provided in Appendix 4 footnote 1.

As illustrated in the charts above, the feature about Castlemilk that was most frequently liked, both in the number of respondents and responses, was clearly the **Social Cohesion** in the area. A majority (50.4%; n334) of the Adults surveyed mentioned social cohesion in the area as a like (531 likes), highlighting neighbours, friends and family in the area. “Neighbours is a big thing” or that they felt a sense of belonging to the area, a strong sense of community spirit with many responding that friends and family in the area would help them if asked. This strong expression of social cohesion in Castlemilk reiterates the views expressed on the seven “statements” that Castlemilk residents positively view their community as a strength with further evidence being the number of responses (10.7% of respondents; 75 likes) that expressed **Community Safety** as a “like”.

The second most frequent category was **Local Facilities**, with 28.8% (n191) of respondents providing at least one “like” that came under this category (227 likes). In relation to local facilities, 8% mentioned the local shops positively whilst local clubs were mentioned frequently as being important to them along with local assets such as the swimming pool, gym, community complex, Pantry and Jenniburn Centre.

More than a fifth of the adults identified the **Physical Environment** (21.4% of respondents; 156 likes) as a positive about their local area. The majority of those mentioning the physical environment highlighted the access to green space, parks

and woodlands but there was a significant number (6.5% of respondents; 43 likes) of responses that identified improvements to the fabric of the local area (e.g., housing improvements in recent years).

Finally, it should be noted that whilst **Public Transport** is a concern for many in Castlemilk (see Section 3.4 below) there were 43 respondents (6.5%; 69 likes) that mentioned public transport positively.

3.4 - Things that You Dislike about the Local Area

Question 7 in the survey asked respondents to list up to 3 things that they disliked about the local area. It was an open question where responses were entered into a text box, thereby allowing the potential for a wide variety of responses.

In total, 612 respondents (92.3% of those surveyed) identified at least one thing that they disliked about the local area, totalling 1,248 “dislikes”. For analysis purposes, the responses have been grouped into ten thematic categories, as illustrated in charts below. Examples of the responses for each category are provided in Appendix 4 footnote 2. It could be argued that the Litter/Dog Fouling/Fly Tipping could/should be included within the anti-social Behaviour category but it was felt necessary to have it as a separate category due to the large number of responses that specifically mentioned it as a “dislike”.

Concerns relating to **Shopping/Café/Restaurants** in the Castlemilk area was the feature that was most frequently disliked, both in the number of respondents who mentioned it and in the total number of responses. Almost half (48.7%; n323) of the adults surveyed provided at least one “dislike” response that could be grouped under this heading, totalling 332 “dislikes” responses. This number of respondents was more than double the number for the next highest category.

It is common in community surveys for the same topic to feature frequently both about the “likes” and “dislikes” and this has happened in this survey, especially in relation to shopping and public transport. The “like” and “dislike” responses

about shopping will be due primarily to an individual person's shopping needs but the level of "dislike" responses did far exceed the number of "like" responses. The lack of a supermarket in the local area was most frequently mentioned among the "dislike" comments, but many also commented on the lack of a 'decent café' or restaurant in the local area.

Whilst shopping/café/restaurant was clearly the most frequent "dislike", there were four "dislike" categories that had a very similar level of negative responses. The second highest "dislike" about Castlemilk among the adults surveyed was **Anti-social behaviour** with nearly a quarter of adults (23.7%; n157) identifying it as a "dislike", totalling 228 "dislike" response. This was closely followed by

- **Litter/Dog Fouling/Fly Tipping** (23.3%; 155 respondents – 159 "dislike" responses);
- **Public Transport** (22.9%; 152 respondents – 190 "dislike" response); and
- **Lacking Activities/Activities not communicated well** (22.5%; 149 respondents – 171 "dislike" responses).

The level of respondents who identified anti-social behaviour as a dislike, especially when added to the concerns re "litter/dog fouling/fly tipping", highlights that there is a widely held view among Castlemilk residents that some residents' behaviour is impacting negatively on the local area. Youth crime in the area, loitering and drug use were examples of issues that made residents feel unsafe in the area. Street lighting was highlighted as an area for improvement.

As mentioned previously, **Public Transport** appears both as a "like" and dislike" within the adult survey data. This will be due to individuals differing transport needs i.e., whether their need for public transport is to access local amenities or the need for public transport is to travel further from Castlemilk. Public Transport was identified as a "dislike" by over three times more adults (152; 22.9%;) than the that mentioned it among their "likes" (43; 6.5%) about the local area. The public transport issues that were highlighted most frequently were:

- the lack of a rail link in the area;
- an inconsistent bus service in some areas; and
- a lack of any transport, particularly in the bad weather.

3.5 - Social Activity/Volunteering

Questions 9 -10 in the survey asked about residents' participation in local social clubs etc and whether they had volunteering in any social clubs etc in the previous year. The charts below illustrates the responses to those questions.

38.4% of residents surveyed indicated that they were a member of a social club etc which, in comparative terms, is a high level of social activity. When a similar question was asked in a Glasgow wide survey, the level of social activity was 26% (2018 NHS Greater Glasgow & Clyde Health and Wellbeing Survey).

45.4% of residents surveyed indicated that had given up time (volunteered) to help a social club etc within the last year. This level of volunteering compares very favourably with the levels of volunteering identified in Glasgow wide and Scotland wide surveys which provides further evidence of a high level of community spirit within Castlemilk (Glasgow: 24.2% 2019 Scottish Household Survey; 20% 2018 NHS Greater Glasgow & Clyde Health and Wellbeing Survey – Scotland: 27% 2021 Scottish Household Survey).

4 - Castlemilk Survey Findings (Under 18s)

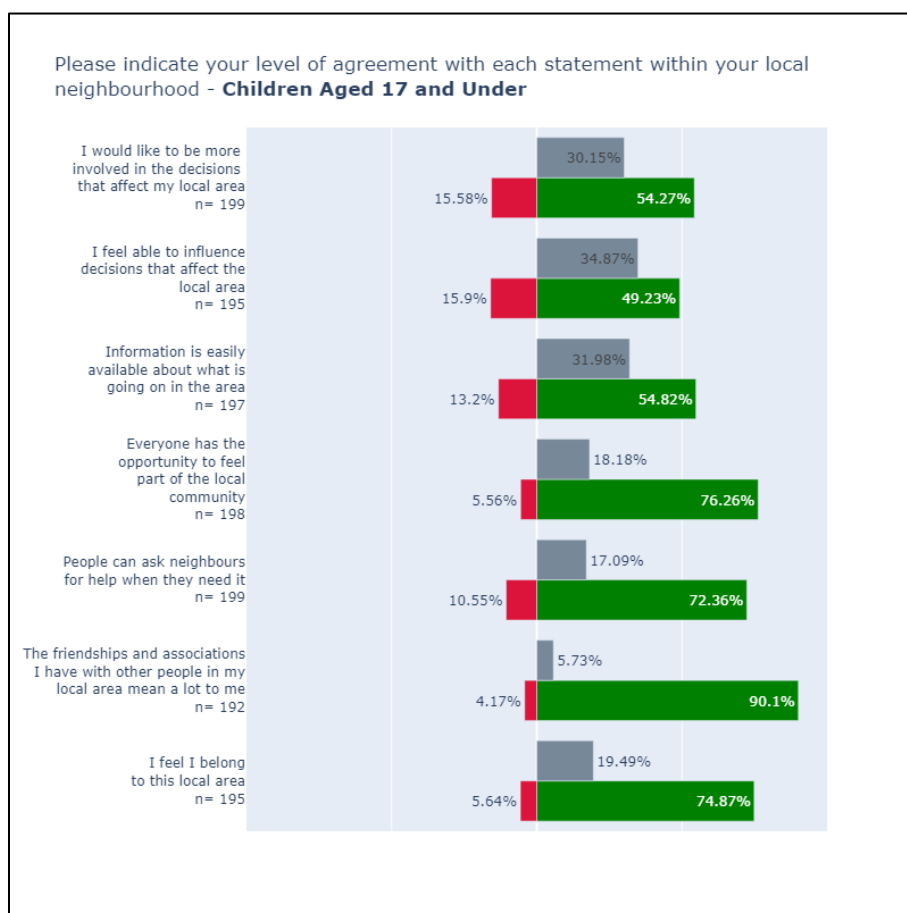

As previously mentioned, 205 surveys, with the same questions, were completed by children aged 17 or under. Within the 205 surveys, 171 were completed by children under 12, with the assistance of local primary schools, and 34 responses from those aged 12-17. The small number of surveys from 12-17 year olds is reduced further when you consider the non-completion/don't know answers (e.g., only 14 provided a Yes or No answer to the question on whether they had seen positive change in the last year years). As there would a limitation to the statistical importance that can be given to those 34 surveys if analysed separately, the survey findings have been presented as one collective group (i.e., under 18s).

4.1 - Neighbourhood Statements

Understandably, there was a larger percentage of neutral (neither agree/disagree) responses for six of seven statements compared to the adult response, with the exception being “the friendships and associations ...mean a lot to me”.

Generally, the under 18s had a more positive outlook than the adult respondents with more agreeing than disagreeing responses for **ALL** seven statements, ranging from 22 times more positive responses re “the friendships and associations...” to three times more positive responses for “able to influence decisions...”.

There were two statements (more involved in the decisions...; and “ask neighbours for help...”) for which there was a higher percentage of “disagree” responses by the under 18s than among the resident adults’ responses.

4.2 - Have you seen a Positive Change in the Local Area in the last Three Years?

There was also a more positive response to whether you had seen positive change in the last three years when compared with the adult residents' responses. Excluding the "don't knows", the percentage of under 18s who answered Yes was 57% compared to 39% for the adults.

Under 18s n=205						
Table 2: Q8 = Have you seen a positive change in the local area in the last three years?						
Age Range	Yes		No		Don't know	
Under 18s	56	28%	42	21%	102	51%

4.3 - Things that You Like about the Local Area

As with the adult survey, the Under 18s were asked to identify up to 3 things that they liked about their local area. Similarly, it was an open question where responses were entered into a text box, thereby allowing for the potential of a wide variety of responses.

96.5% (n198) of the children survey identified at least one feature about their local area that they liked (total of 536 "likes"), which was a much higher percentage of surveys than for the adults surveyed (72.2%). There were also a wider range of "like" responses from the Under 18s. For analysis, the responses have been grouped into 11 thematic categories, as illustrated in the charts below. Examples of the responses for each category are provided in Appendix 5 footnote 3.

As illustrated in the charts above, the local feature that was most frequently liked, both in the number of respondents and responses, was the **Local Shops and Fast Food**, with McDonalds being a frequently mentioned favourite. A majority

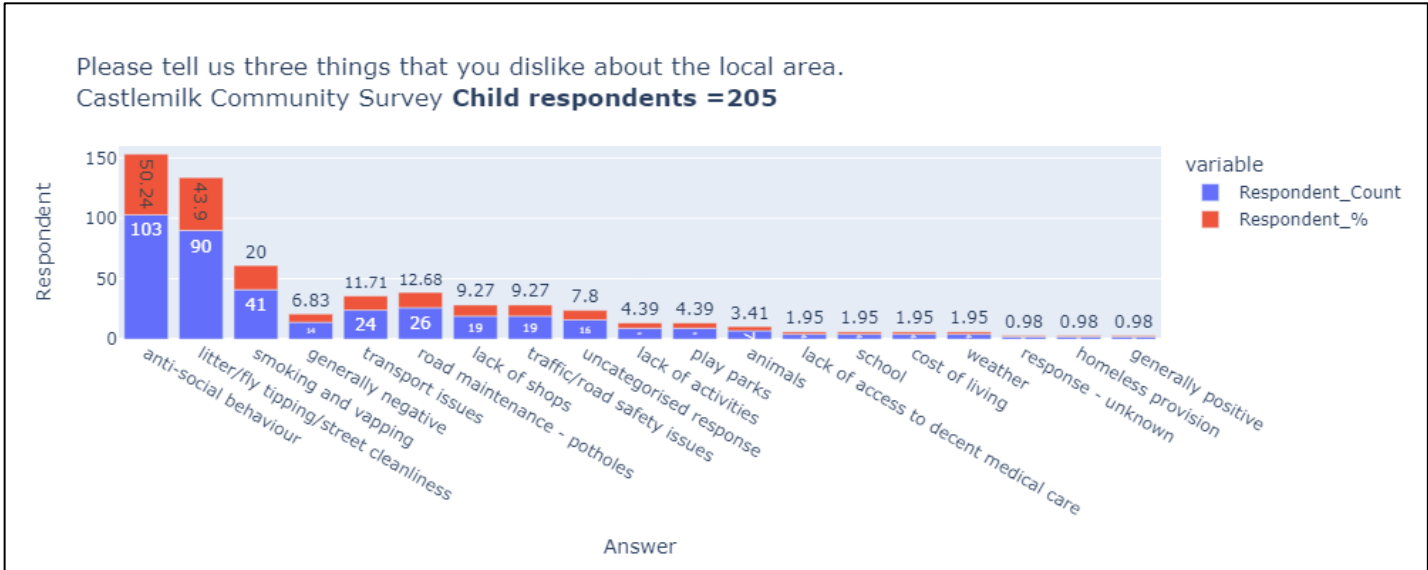

(50.7%; n104) of the Under 18s surveyed provided at least one “like” response that could be grouped under this heading, totalling 145 “likes” for “local shops and fast food”.

The second most frequent category was the **Social Connectedness** of the area, with lots of friends and family in the local area. 46.8% (n96) of under 18s provided at least one “like” that came under this category (123 likes). This high level of response ties in with the very high level of agreement with the “friends and associations” statement and the high proportion that identified neighbours as people who they ask for help when needed.

More than a third of the Under 18s identified **Clubs and Leisure Facilities** (34.2% of respondents; 81 likes) as a positive about their local area highlighting the number of local clubs and leisure facilities available to them, such as football parks and swimming pools. A similar level of Under 18s provided “like” responses that related to local **Green Space and Nature** (30.7% of respondents; 73 likes) with frequent positive mentions of having access locally to parks, woods and gardens.

4.4 - Things that You Dislike about the Local Area

187 (91.2% of surveys) Under 18s identified at least one thing that they disliked about the local area (total of 491 “dislikes”). It should be noted that the number of under 18s who submitted a “dislike” was less than the number who submitted a “like” (n198) which is another indication of the overall positive nature of the under 18s responses. There were a wide range of “dislike” responses from the Under 18s which, for analysis purposes, have been grouped into 19 thematic categories, as illustrated in the charts below. Examples of the responses for each category are provided in Appendix 5 footnote 4.

Even with the greater number of “dislike” categories than in the adult survey findings, there is more clarity in the under 18s survey as to their main “dislikes” about the local area. Two related categories (anti-social behaviour and litter/fly tipping/street cleanliness) are mentioned as a “dislike” **more than twice as frequently** as any other category.

Anti-social behaviour was the local feature that was most frequently disliked, both by the number of respondents and in the number of responses. A majority (50.2%; n103) of the Under 18s surveyed provided at least one “dislike” response that could be grouped under this heading, totalling 145 “dislikes” responses. The level of “dislike” for anti-social behaviour among the Under 18s in Castlemilk is significantly higher than the percentage (23.7%) of adult residents in Castlemilk who identified it as a “dislike”. Given that anti-social behaviour is usually associated with young people, it is noticeable that more young people surveyed in Castlemilk viewed anti-social behaviour as a negative issue than did local adult residents.

The second highest “dislike” about Castlemilk among the Under 18s surveyed was **Litter/Fly Tipping/Street Cleanliness**, which could be classified as environmental anti-social behaviour. 43.9% (n90 respondents; 104 responses) of the Under 18s dislike the impact that Litter/Fly Tipping has on the local physical environment and would like the streets in their local area to be cleaner.

One in every five (20%: n41 respondents; 48 responses) Under 18s identified **Smoking/Vaping** as a “dislike” which was a topic that was not mentioned among the Adult responses and reflects the recent increase in vaping among teenagers/young people.

The responses also show that **Transport related themes** were the 4th, 5th and 7^h most frequent “dislikes”. Transport as an issue is mentioned far more often than the “lack of activities” and “play park”. “Clubs and leisure facilities” is mentioned 4 times more frequently (81 responses) as a “like” than the combined number of times that “lack of activities” and “play park” (20 responses) is mentioned as a “dislike”.

Section 4.5 - Social Activity/Volunteering

Questions 9 -10 in the Under 18s survey asked about their participation in local social clubs etc and whether they had volunteering in any social clubs etc in the previous year. The charts below illustrates the responses to those questions.

63% of Under 18s surveyed indicated that they were a member of any social club etc which, in comparative terms, is a much higher level than among the adult's resident in Castlemilk (38.4%). That is to be expected given the likelihood that there will be a higher level of participation in sports among the under 18s than among the adult population.

56.35% of under 18s surveyed indicated that had given up time (volunteered) to help a social club etc within the last year.

5 - Castlemilk Survey Findings (Non Resident Adults)

The “non-resident” respondents were those who answered “I work in Castlemilk” or “I don't live or work in Castlemilk” to question 1. When they were asked “Why are you visiting Castlemilk today?”, only 48 respondents from the possible 167 respondents provided an answer with the reasons given being as follows:

- 38 – I am here for Local Services;
- 9 – I am here to visit friends and family; and
- 6 – I am here for shopping

A clear majority (38) responded ‘I am here for local services’ with 35 indicating this as the only reason and a further 3 respondents combining this with other reasons to visit. No details were asked as to what local services they were visiting/using.

5.1 - Neighbourhood Statements

When non-resident respondents were asked to provide a view on the seven “statements”, there was, as expected, a much larger percentage of non-completions/don't knows compared to resident responses. For the non-residents who did provide a response, they were generally more positive in their responses to the statements, except for the “I feel I belong to this local area” statement.

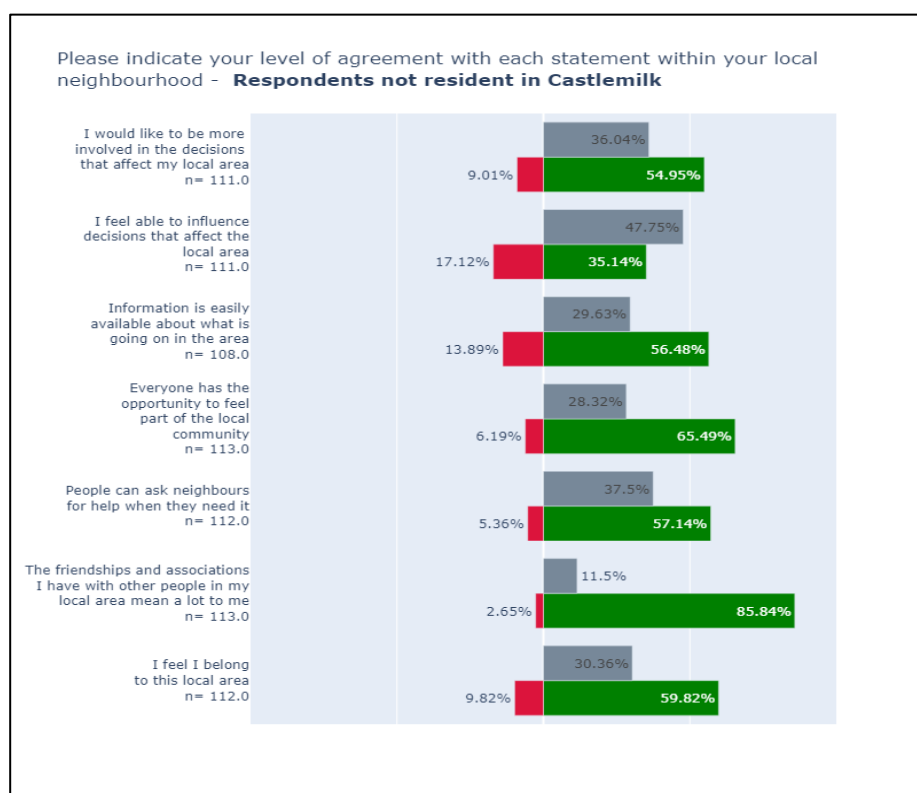

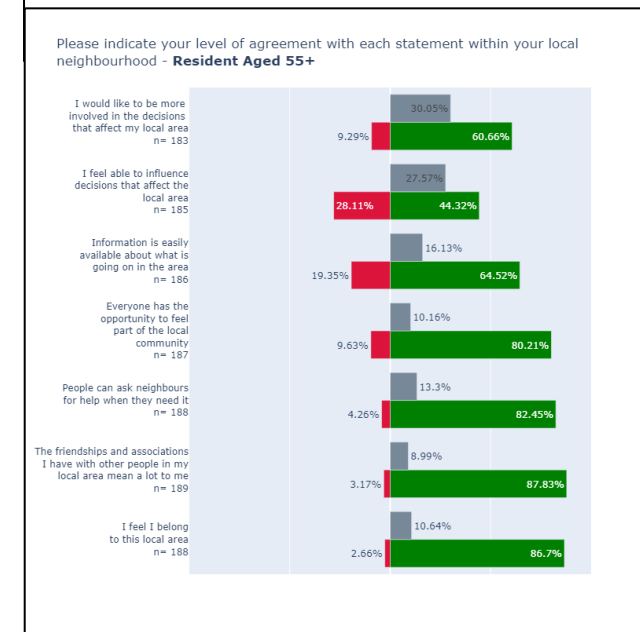

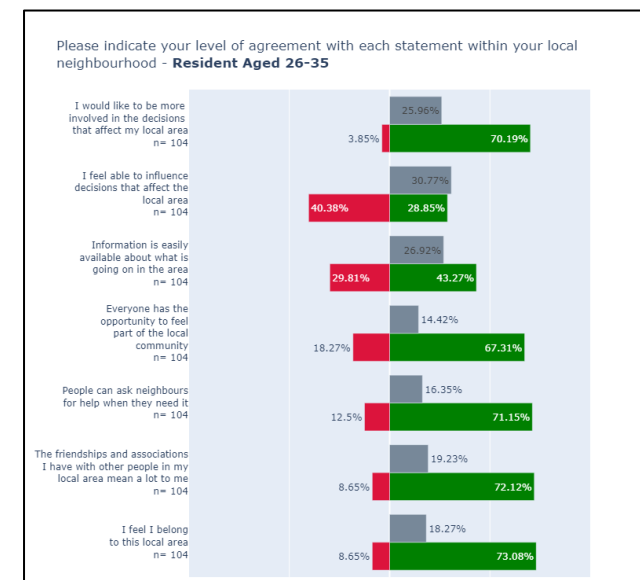

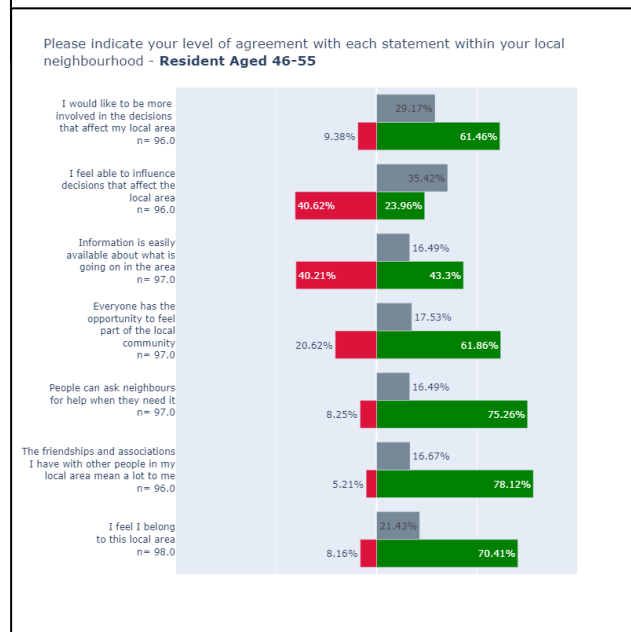

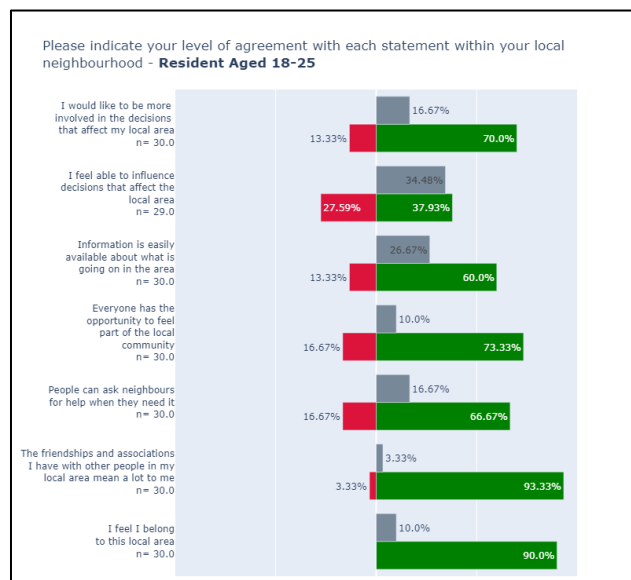

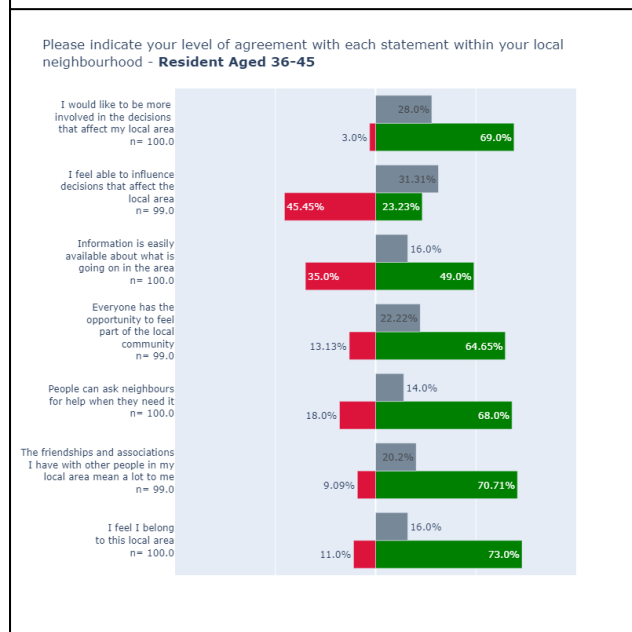

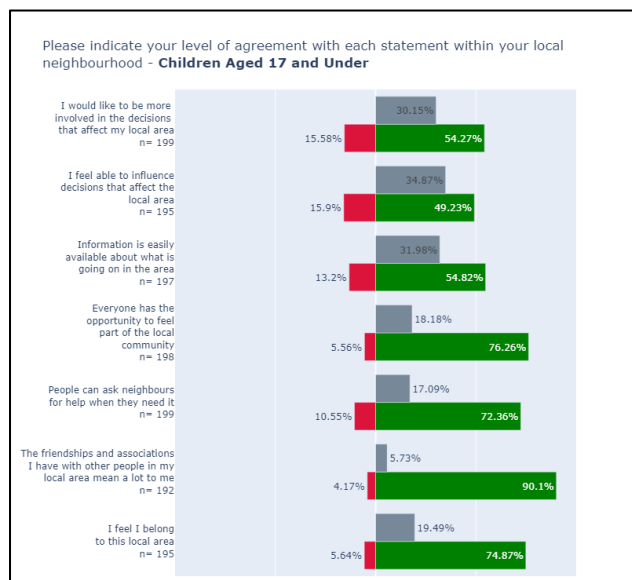

Table 3 shows that:

- Half of the non-residents either didn't provide an answer to the question or answered “don't know”.
- A small majority (55%), of those who provided a definitive answer, responded that they had seen positive change over the last 3 years but this would not be viewed as significant given the small difference and the level of non-completions/don't knows.

Non-Resident Adults n=167				
Table 3: Q8 = Have you seen a positive change in the local area in the last three years?				
Age Ranges	Yes	No	Did not answer	Don't know
Did not answer	0	0	37	1
